SH-Series 1966-'84

Flathead Power™

Vintage enthusiasts value authenticity and aesthetics, but they still like to go fast. So give that antique hog some more snort with authentic looking Flathead Power™ components from S&S®. We're old school. We still teach the three R's: Restoration, Reproduction, and Retro custom!

The 3 R's of The Old School

Restoration

S&S offers a large and growing number of Flathead Power™ components that can be used to restore your vintage iron. We take great pains to create authentic looking parts that fit and perform better than the originals.

Reproduction

If you want to build a reproduction bike for a "rider", you can't go wrong with a complete Flathead Power™ engine from S&S. Stock appearing engines in several displacements are available for overhead valve big twins from 1936-'84.

Retro-Custom

Original vintage engines are expensive and hard to find. So why not use a Flathead Power engine in your retro-custom? More powerful, more reliable, and less money.
